Summary Information

Repository: Massachusetts Institute of Technology. Libraries. Department of Distinctive Collections

Creator Wiener, Norbert, 1894-1964

Title: Norbert Wiener papers

ID: MC-0022

ID [aspace_uri]: /repositories/2/resources/600

Date [inclusive]: 1898 - 1981

Physical Description: 30 Cubic Feet (71 manuscript boxes, 2 half manuscript boxes)

Language of the Material: English

Physical Location: Materials are stored off-site. Advance notice is required for use.

Abstract:

This collection documents the career of Norbert Wiener. Wiener was a member of the faculty at the Massachusetts Institute of Technology from 1919 to 1960 in the Department of Mathematics, and was a leader in the field of cybernetics. The material in this collection includes biographical information, correspondence, course material, manuscripts, and reprints.

Citation: Norbert Wiener Papers, MC-0022, box X. Massachusetts Institute of Technology Institute, Archives and Special Collections, Cambridge, Massachusetts.

Biographical Note

Norbert Wiener was a mathematician who made numerous contributions to the development of communication and control theories. He coined the word "cybernetics" to describe this new science.

There are a number of autobiographical and biographical sources available that provide an in-depth treatment of Wiener's life. Because the bulk of the collection is arranged chronologically, a chronology of Wiener's life is supplied in lieu of a brief biography.

1894 November 26

Norbert Wiener was born in Columbia, Missouri to Bertha Kahn Wiener and Leo Wiener, a professor of foreign languages at the University of Missouri.

1895

The Wiener family moved to Cambridge, Massachusetts, where Leo Wiener became a professor of Slavic languages at Harvard.

1898

Wiener's sister Constance Wiener (Franklin) was born.

1901

Wiener entered the third grade at the Peabody School; after quickly advancing to the fourth grade, he was removed from the school by Leo Wiener. Except for this brief experience, Wiener was taught by his father until he entered high school.

The Wiener family visited Europe.

1902

Wiener's sister Bertha Wiener (Dodge) was born

1903

Wiener entered Ayer High School.

1906

Wiener graduated from Ayer High School and entered Tufts College where he studied mathematics and biology.

1909

Wiener received an AB degree, cum laude, from Tufts and entered Harvard Graduate School to study zoology.

1910

Wiener entered the Sage School of Philosophy at Cornell University with a scholarship. He studied with Frank Thilly, Walter A. Hammond, and Ernest Albee.

1911

Wiener transferred to Harvard Graduate School to study philosophy. He studied with Edward V. Huntington, Josiah Royce, G. H. Palmer, Karl Schmidt, and George Santayana.

1912

Wiener received an MA degree from Harvard.

1913

As a John Thornton Kirkland Fellow of Harvard, Wiener studied logic and philosophy with Bertrand Russell, G. H. Hardy, J. E. Littlewood, G. E. Moore, and J. M. E. MacTaggart at Cambridge University.

Wiener received a PhD degree from Harvard.

1914

Wiener received the Bowdoin Prize from Harvard.

As a Frederick Sheldon Fellow of Harvard, Wiener returned to Cambridge University to study mathematics and philosophy.

Continuing as a Kirkland Fellow, Wiener studied mathematics with David Hilbert, Edmund Husserl, and Edmund Landau at Göttingen, Germany.

1915

Because of World War I, Wiener finished his year as a Sheldon Fellow at Columbia University where he studied philosophy and mathematics with John Dewey.

1915-1916

Wiener was appointed an assistant and a docent lecturer in Harvard's Philosophy Department and lectured on the logic of geometry.

1916

Wiener served with Harvard's reserve regiment at the Officer's Training Camp in Plattsburg, New York

1916-1917

As an Instructor of mathematics, Wiener taught at the University of Maine in Orono.

1917

Wiener briefly worked as an apprentice engineer in the Turbine Department of the General Electric Corp. in Lynn, Massachusetts

Wiener served with the Cambridge ROTC.

1917-1918

Wiener was employed as a staff writer for the *Encyclopedia Americana* in Albany, New York

1918

Wiener was elected into the American Mathematical Society.

As a civilian employee, Wiener worked on computations of ballistic

tables for the US Army at the Aberdeen Proving Ground, Maryland, under Oswald Veblen.

1918-1919

Wiener served as an Army private at the Aberdeen Proving Ground, Maryland.

1919

Wiener worked as a journalist with the *Boston Herald*.

1919-1920

Wiener received an appointment at MIT as instructor of mathematics.

1920

Wiener attended the International Mathematical Congress in Strasbourg as MIT's representative and presented a paper on Brownian Motion. He also visited Cambridge and Paris.

1922

Wiener and Constance Wiener visited London and Paris.

1924

Wiener and Bertha Wiener visited Portiers and Germany.

Wiener was promoted to assistant professor of mathematics at MIT.

1925

Wiener attended the International Mathematical Congress in Grenoble and the British Association for the Advancement of Science meeting in Southampton. He also visited with Richard Courant and Felix Klein in Göttingen.

1926

Maugeurite Engmann and Wiener were married and visited Switzerland and Italy.

Wiener was made a Fellow of the American Academy of Arts and Sciences.

1926-1927

Wiener received a Guggenheim Fellowship to study in Göttingen and in Copenhagen, where he collaborated with Harald Bohr. He studied haphazard motion, periodogram analysis extensions of Fourier series and Fourier integral theory and taught a course on general trigonometry developments at Göttingen.

1928

Wiener spoke at the Symposium on Analysis Situs for the American Mathematical Society meeting.

Wiener's daughter Barbara was born.

1929

Wiener was promoted to associate professor of mathematics at MIT.
Wiener's daughter Margaret was born.

1929-1930

Wiener taught at Brown University as an exchange professor.

1930-1936

Wiener and Yuk Wing Lee developed and patented electrical network systems.

1931-1932

Wiener went to Cambridge University as a visiting lecturer; presented lectures on the Fourier Integral and its applications at Trinity College.

1932

Wiener was MIT representative at the International Congress of Mathematics, Zurich.

Wiener was promoted to professor of mathematics at MIT.

1933

Wiener collaborated with R. E. A. C. Paley.

Wiener began participation in interdisciplinary seminar group at Harvard Medical School.

Wiener was awarded Bôcher Prize by the American Mathematical Society; lectured on Brownian Motion at the annual meeting. Wiener was elected to the National Academy of Sciences.

The Fourier Integral and Certain of Its Applications was published.

1934

Wiener delivered the American Mathematical Society Colloquium Lectures at Williamstown, Massachusetts.

Fourier Transforms in the Complex Domain was published.

1935

Wiener lectured at Stanford University and in Japan on his way to China.

1935-1936

Wiener was a visiting professor at Tsing Hua University in Peiping, China.

1936

Wiener attended the International Congress of Mathematicians in Oslo, Norway, and lectured on Tauberian Gap Theorems.

1936-1937

Wiener collaborated with Harry Ray Pitt at MIT.

1937

Wiener gave the Dohme lecture at Johns Hopkins on Tauberian Theorems.

1938

Wiener lectured on analysis at the Semi centennial of the American Mathematical Society.

1940

Wiener served as chief consultant in the field of mechanical and electrical aids to computation for the National Defence Research Committee.

1940-1945

Wiener was associated with the NDRC's Office of Scientific Research and Development, Statistical Research Group and Operational Research Laboratory at Columbia University. He was part of an interdisciplinary team at MIT studying the mathematical aspects of guidance and control of anti aircraft fire. Wiener worked on the design of fire control apparatus for anti aircraft guns with Julian Bigelow.

1941

Wiener resigned from the National Academy of Sciences.

1945

Wiener collaborated with Arturo Rosenblueth at the Instituto National Cardiologia in Mexico and attended the Mexican Mathematical Society's Conference held in Guadalajara.

Wiener participated in a study group set up by John von Neumann and attended a meeting held in Princeton on communication theory.

1946-1950

Wiener and Arturo Rosenblueth received a five year Rockefeller Foundation Grant that allowed them to collaborate in Mexico and at MIT on alternating years.

1946

Wiener worked with Mark Kac and Arturo Rosenblueth at MIT.

Wiener lectured at the National University of Mexico.

Wiener attended the first three Josiah Macy Jr. Foundation Conferences and the Conference on Teleological Mechanisms sponsored by the New York Academy of Sciences.

Wiener received an Honorary ScD degree from Tufts College.

1947

Wiener visited England and France and gave lectures on harmonic analysis in Nancy, France.

Wiener collaborated with Rosenblueth at the Instituto Nacional de Cardiologia in Mexico.

1948

Wiener delivered a talk at the American Mathematical Society's Second Symposium on Applied Mathematics.

Cybernetics was published.

1949

Wiener delivered the American Mathematical Society's Josiah Willard Gibbs Lecture at the annual meeting. Wiener collaborated with Rosenblueth in Mexico.

Extrapolation, Interpolation, and Smoothing of Stationary Time Series with Engineering Applications was published.

Wiener received the Lord & Taylor American Design Award.

Wiener served as Visiting Lecturer in Mathematics at Carnegie Institute of Technology during the week of May 2-7.

1950

Wiener delivered a talk at the International Congress of Mathematicians at Harvard University.

The Human Use of Human Beings was published. Wiener attended the Seventh Macy Conference.

1951

Wiener taught at the University of Paris, College de France, under a Fulbright Teaching Fellowship and gave lectures in Madrid.

1951-1952

Wiener collaborated with Rosenblueth in Mexico and received an honorary ScD degree from the University of Mexico.

1952

Wiener gave the Forbes Hawks lectures at the University of Miami.

Wiener received the Alvarega Prize from the College of Physicians in Philadelphia.

1953

Wiener taught a summer school course with Claude Shannon and Robert Fano titled Mathematical Problems of Communications Theory.

Wiener delivered lectures on the theory of prediction at the University

of California at Los Angeles.

Ex-Prodigy was published.

1954

Wiener taught summer course Mathematical Problems of Communication Theory again.

Wiener went on a lecture tour of India and attended the Indian Science Congress in Hyderabad.

1955-1956

Wiener became a visiting professor at the Indian Statistical Institute in Calcutta.

1956

Wiener went on a lecture tour of Japan on his way back from India and then taught a summer school course at UCLA.

I Am A Mathematician was published.

1957

Wiener was awarded the Virchow Medal from the Rudolf Virchow Medical Society.

Wiener received an honorary ScD degree from Grinnell College.

1958

Wiener taught at the Varenna Summer School in Italy.

Nonlinear Problems in Random Theory was published.

1959

The Tempter was published.

Wiener was made an Institute Professor at MIT.

Wiener taught a summer school course at UCLA.

1960

Wiener retired from MIT, becoming Institute Professor Emeritus.

Wiener received the ASTM Research Medal.

Wiener taught at the University of Naples in Italy and visited the United Soviet Socialist Republic.

1961

Wiener taught a summer school course at UCLA.

Harmonic Analysis was published.

1962

Wiener delivered the Terry Lectures at Yale University; they were

titled "Prolegomena to Theology."

Wiener taught at the Institute of Theoretical Physics, University of Naples, Italy.

1963

Wiener taught a summer school course at UCLA.

1964

He also lectured in Norway and Sweden.

Wiener went to Amsterdam as a visiting professor and as the honorary head of Neurocybernetics at Netherlands Central Institute for Brain Research.

Wiener received the National Medal of Science from President Johnson.

God and Golem, Inc. was published (based upon the Terry Lectures).

1964 March 18

Wiener died in Stockholm, Sweden.

1965

God and Golem, Inc. received the National Book Award.

1966

Differential Space, Quantum Systems and Prediction was published.

Activities

American Association of Arts and Sciences - Member

American Institute of Electrical Engineers - Applied Mathematics Subcommittee

American Mathematical Society - Council member, 1938; vice-president, 1936-1937

Appalachian Mountain Club - Member

Benjamin Franklin Fellow of the Royal Society for the Encouragement of Arts, Manufactures and Commerce

Black Mountain College - Board of Trustees

College Entrance Examination Board - Commission on Examinations in Mathematics, 1934-1935

Econometric Society - Member

Friends of China - Advisory Board, 1935

International Association for Cybernetics - Member

International Congress of Mathematicians, 1940 - Organizing Committee, Committee on Invitation of Speakers and Head of Conference Committee in Probability and the Theory of Integration

International Congress of Mathematicians, 1950 - Organizing Committee and Entertainment Subcommittee

London Mathematical Society - Member

National Academy of Sciences - Member

New England Committee for Relief in China - Member

Union Matematica - Honorary president

[Return to Table of Contents](#)

Scope and Contents

The Norbert Wiener papers consist primarily of correspondence and manuscripts of writings by Wiener and by others. The collection spans the years 1898 to 1966 with the bulk of the material dating from 1910 to 1963.

From early childhood Wiener was perceived as exceptional, and this perception in part explains the large amount of material from his youth in the collection. Writings from his high school years and early correspondence with his family were retained and can be found in the collection.

In 1910, when Wiener was sixteen, he was away from his family for the first time. The correspondence between Wiener and his family began at this time, when he was attending Cornell University. He wrote his sisters and parents letters in Latin, German, French, and English while he was studying at Cornell and later at Cambridge University, the University of Göttingen, and Columbia University. The family letters continue during his first work experiences with the Encyclopedia Americana in Albany, New York, the University of Maine in Orono, and at the Aberdeen Proving Ground in Maryland where he worked for Oswald Veblen. These letters chronicle Wiener's academic progress, interests, and perceptions of the places that he lived. There are few personal letters from Wiener to his family after 1926, the year of his marriage. While the collection does contain letters from his parents and sisters to Wiener, most are from Wiener to his family.

During his early years, most of Wiener's letters were addressed to his father, Leo Wiener, and this correspondence shows the close relationship between father and son. Until Wiener entered high school, his father taught him, and Leo Wiener continued to play an influential part in his education and early professional life. Leo Wiener was a Harvard philologist and Wiener's letters usually inquire about the progress of Leo Wiener's latest project or ask advice for dealing with criticism of his father's work. The letters also ask and comment upon advice from Leo Wiener. At the age of twenty-three, Wiener asked permission of his father to

join the Army. It was due to his father's suggestion that Wiener started to write popular as well as scientific articles (see letter of January 12, 1918).

Other material in the collection from Wiener's childhood and youth further illustrates his intellectual development. Series 3 contains his senior essay from Ayer High School and some of his college notebooks. His earliest notebooks concern a variety of subjects yet they often have doodles and mathematical problems in them as well. A number of his graduate philosophy essays plus drafts and worksheets for his Harvard PhD thesis are also available. Published and unpublished articles written at Cambridge and Göttingen start to reflect Wiener's transition from philosopher and logician to mathematician (Series 3). Other information about Wiener's youth is in Series 2, which includes Army records, grades from Tufts College, and graduation programs from Ayer High School, Tufts, and Harvard.

Although the earliest records in the collection are letters from Wiener to his family, the letters from 1926 to 1934 are primarily from friends and colleagues to Wiener. From 1934 on, more copies of Wiener's responses follow incoming letters so that the collection provides a more complete historical perspective.

During his post-graduate days at Cambridge University, Wiener started to correspond with his fellow students from Harvard and Cambridge, even though they were several years older. While in Cambridge he received a few letters from another Harvard philosophy fellow who was studying at Oxford, T. S. Eliot. Wiener also corresponded with some of his professors including Bertrand Russell and G. H. Hardy. For Wiener's wedding present, another professor, E. V. Huntington, sent a "... set of postulates" (see letter of March 15, 1926, in folder 28).

The material added by the family in 1994 includes information about Margaret Wiener and family photographs.

In the correspondence dated 1920 and later, professional correspondence is dominant. Also, as Wiener's scholarly reputation grew, the bulk of his correspondence increased. Because of his varied interests and worldwide travel, Wiener corresponded with a large community of scholars and scientists, often on a personal as well as a professional level. Correspondents represented in the collection include Harald Bohr, Max Born, Jacob Bronowski, Albert Einstein, R. G. D. Richardson, J. D. Tamarkin, Piet Hein, Margaret Mead, Gregory Bateson, and Grey Walter. Because of the large number of correspondents, a selective index is included in this finding aid.

Wiener's development as a mathematician is illustrated in the correspondence and through Wiener's writings. A December 1931 letter from J. D. Tamarkin, for example, discusses all the errors that Wiener made in his earliest work, "Tauberian Theorems." The gradual development of information theory and cybernetics can be traced through letters from the 1940s, especially through correspondence with Arturo Rosenblueth, John von Neumann, Warren S. McCulloch and other investigators of the new science. The exchange of opinions on mathematical problems in Wiener's correspondence sometimes served as a sounding board for future articles. While Wiener often worked alone, he also depended upon his colleagues' ideas. The majority of Wiener's collaborative efforts were with fellow mathematicians such as Aurel Wintner, Dirk Jan Struik, and Max Born. Wiener's letters emphasize the fruitful results that occurred from the lengthy collaborations that he had with H. R. Pitt and R. E. A. C. Paley.

Wiener's interest in applied mathematics and interdisciplinary science resulted in his collaboration with scientists in many fields. Series 3 contains some of the published and unpublished works that Wiener wrote with his colleagues, and Series 1 further documents his collaborative efforts. During World War II, Wiener worked with a young engineer, Julian Bigelow, for the National Defence Research Committee (NDRC) on a fire control apparatus for anti-aircraft guns, and some of their progress is documented in the correspondence for that period. After the war, Wiener's work with biologists, physiologists, and other medical doctors, as well as with engineers, expanded. His best known work was with the noted physiologist Arturo Rosenblueth. The collection contains numerous letters between them and some of their writings including *Dynamics of the Nervous System*, an unpublished book (see folders 606-608). Series 1 and 3 also include material about encephalography from the work of Wiener and scientists at Massachusetts General Hospital such as Doctors John Barlow and Mollie Brazier. Wiener became increasingly involved in developing prosthetic devices with the help of his medical and engineering colleagues. Not all of Wiener's collaborative efforts resulted in a joint paper; many of his individual speeches and articles depended upon information that he gained from others, a fact that Wiener always made clear.

Students and colleagues sent Wiener manuscripts and reprints of their own works in order to receive his opinion. These writings are in Series 4. Many of the scientists who collaborated with Wiener are represented in this section, for example, R. E. A. C. Paley, Pesi Masani, Walter Pitts, Joseph Doob, and Armand Siegel. Another way that Wiener expressed his opinion about his colleagues' works was through the many book reviews he wrote (see Series 3).

While the collection does not contain all of Wiener's written work, it has a great deal of the earliest and the latest work. The writings in Series 3 start to become sparse in the 1920s, and large gaps continue until 1948. Because approximately half of the writings were unpublished, a unique view of Wiener's work is provided by the collection. The unpublished writings include various types of works, such as a lecture titled, "Mathematical Problems of Communication Theory" (folder 734), a speech on "The Computing Machine and Form (Gestalt)" (folder 665), and a memorandum on the scope of a suggested computing machine (folder 558). Further insights can be gained from the collection's published works that progress from the early draft stage to the final reprint. The progression of Wiener's theories can be interpreted throughout his writings. For example, after *Cybernetics* was published in 1948, cybernetics became a recurring topic in his writings, both in published articles and in unpublished speeches and articles. By 1952, Wiener was writing a treatise on cybernetics based upon the work that had been done in the area over the last five years (see folders 685 and 730). He was constantly called upon to define cybernetics, but his definitions did not remain static. The implications and applications of cybernetics expanded over the years, and in 1958 Wiener delivered a speech on "The Relation of Cybernetics to Semantics" (see folder 830).

Wiener's involvement with interdisciplinary work at MIT started prior to his work in cybernetics. For instance, in a letter to Vannevar Bush he supports the idea of a cooperative scientific institute in the Boston area to be called the Institute for Exact Sciences, which would encompass physics, chemistry, mathematics, and astronomy (see letter of November 21, 1934). In 1941, Wiener was on the Supervisory Committee on the Research Center of Applied Mathematics (see folder 61). Wiener's forty year career at MIT enabled him to delve into different areas. When Wiener was retiring in May 1960, he wrote to thank President Julius Stratton and stated that "everything that I have been able to accomplish has been accomplished here at M.I.T...." (see folder 281).

Wiener's letters and writings show that he continually collaborated with students and faculty members at MIT. Wiener would offer ideas to the Institute's engineering faculty, and they would attempt to apply them, often with good results. In 1950, Wiener mentioned in a speech that he was working on a prosthetic "hearing glove" with Jerome Wiesner. The mail response to this speech was overwhelming; however, Wiesner's and Wiener's work was not yet complete and never succeeded (see also folders 623 and 624). Because of Wiener's close contact with his MIT colleagues, it must be presumed that some of his collaborative efforts do not appear in the collection. The collaborations were often casual and verbal. For example, one gap in the collection is the small number of letters and manuscripts that directly relate to Vannevar Bush's and Wiener's work in the '20s on the Bush differential and analyzer.

His students also often helped Wiener with this scientific work, as the correspondence with Norman Levinson and Jerome Lettvin shows. Another illustration of his work with students can be seen in the extensive correspondence and patent information (Series 2) on the electrical network system developed by Wiener and Yuk Wing Lee. Wiener's willingness to help his former students is also apparent in his correspondence. He gave advice and tried to find jobs for many of his students and young colleagues. A December 18, 1941, letter to the director of scientific personnel at the National Research Council suggested the development of more NDRC projects in order to utilize the talents of young mathematicians who were jobless. Some of his students eventually joined the MIT faculty; for example, Yuk Wing Lee, Norman Levinson, and Jerome Lettvin. The collection gives a view into Wiener's personality. Wiener often exchanged ideas on non-scientific subjects with his colleagues in his correspondence. Wiener was increasingly alarmed by the world situation and his letters often reflect his concern. Before World War II, Wiener's letters showed his efforts to place scholars who had lost their positions because of political and social unrest. Two examples are Antonio Zygmund and Yuk Wing Lee. He was a member of such organizations as the Emergency Committee in the Aid of Displaced German Scholars and the China Aid Society. He also wrote several essays about the predicament of German scholars (see especially folders 537 and 543).

After World War II, Wiener felt that many scientists were evading their responsibility to the modern world. He wrote to such friends as Arturo Rosenblueth and J. B. S. Haldane about these social problems. His letters show a consistent refusal to do any work that might be used by the military after the War. In addition, Wiener wrote articles about science and society. The best known article was "A Scientist Rebels" (see folder 573); it and similar articles evoked letters of support from both scientists and laymen.

Wiener's concern with the ramifications of his scientific work was not limited to the military. He exchanged letters and met with Walter Reuther in order to discuss his fears of future unemployment when the automatic factory became operative. Articles that explained automatization and some of its social effects are also included in Wiener's writings (Series 3). During his last fifteen years he became increasingly involved with the development of prosthetic devices and with other health-related problems. While refusing to work for the military, he was always ready to assist the Veteran's Administration.

From the writing of "Unconventionality" (folder 494) in 1918 at his father's suggestion, Wiener never gave up popular writing. Cybernetics had unexpectedly caught the public's eye. Wiener's correspondence markedly increased after its publication in 1948, and many letters were from strangers who wanted to know more about Wiener and his philosophy.

This increase in "fan mail" was noted by his publishers who encouraged Wiener to write more popular articles and books. From the correspondence, it appears that Wiener enjoyed a friendly relationship with Henry Simon of Simon and Schuster and with Jason Epstein of Doubleday and Company, Inc. The collection contains book drafts from a number of his works, including *The Human Use of Human Beings*(folders 639-653a.) and an unpublished book called *The Philosophy of Invention*(folders 752-757).

Wiener was also interested in writing's entertainment value. He wrote science fiction, novels and two autobiographies. Some of his ventures were not successful. He wrote to Orson Welles on June 28, 1941, suggesting a movie plot that was rejected but that eventually led to his own book *The Tempter*(folders 839-861). With Jason Epstein's encouragement, Wiener and Isaac Asimov tried to write a science fiction story which never came to fruition.

Like all public figures, Wiener received some crank mail and articles (see Series 4) from people who hoped that he shared their beliefs. The word that he coined, "cybernetics," became vulgarized in the 1950s and Wiener was erroneously identified with social movements and thoughts that he knew nothing about. For example, many people thought that Wiener founded the Dianetics movement (which later became the Church of Scientology). The true founder, L. Ron Hubbard, did not discourage this belief for a while because Wiener was a valuable, albeit false, ally (see correspondence for 1950-1951). For the most part, Wiener's "fan mail" consisted of letters of admiration to which Wiener often replied.

Materials received from Mrs. Margaret E. Wiener in 1971 consist of 35 volumes of foreign language editions of Wiener's books, nine audio tapes of colloquiums and lectures given by Wiener; and a motion picture film of a Japanese television interview of Norbert and Margaret Wiener.

Revision Description

Edited by Lana Mason to remove aggrandizing terms in the biographical and scope and content notes description.

Conditions Governing Access

Materials in this collection are open unless they are marked as restricted. Restrictions are noted in the container list.

Conditions Governing Access

Some parts of this collection are available online. Links to specific online digital items are found within their entry in this finding aid.

Appraisal

Processed

Processing Information

This collection was processed by Mary Jane McCavitt in September 1980. Processing of the collection was funded by a grant from the National Endowment for the Humanities.

Materials in Box 42 were added by Rachel Van Unen in February 2019.

Separated Materials

General printed material that was not about Norbert Wiener, duplicate copies of reprints, and postcard requests for reprints have been removed from the collection. Photographs and memorabilia have been transferred to the MIT Museum.

Conditions Governing Use

Access to collections in the Department of Distinctive Collections is not authorization to publish. Please see the MIT Libraries Permissions Policy for permission information. Copyright of some items in this collection may be held by respective creators, not by the donor of the collection or MIT.

Related Materials

Supplementary material to the Norbert Wiener papers may be found at the MIT Archives in the records of the Office of the President and of the Provost. Papers dealing with the development of cybernetics may also be found in the Warren Sturgis McCulloch Papers at the American Philosophical Society in Philadelphia. Other collections of possible interest are

the Alan Tower Waterman Papers and the Oswald Veblen Papers, both in the Library of Congress Manuscript Division. Some notebooks and papers of Leo Wiener are located at the Harvard University Archives.

Alphabetical List of Writings

Note: The following is an alphabetical list by title of Norbert Wiener's published and unpublished writings. All published works are listed, including those that are not in the Norbert Wiener Papers. The title of each published work is followed by the date of publication; the title of each unpublished work is followed by the date the work was written. Some dates have been supplied by the processor. When the date was unknown the probable time the work was written is indicated by a year (e.g., ca. 1950) or by a span of years (e.g., 1950-1960) whenever possible.

- An Account of the Spike Potential of Axons, 1948.
- Active Fields in Mathematics Since the Beginning of the Century, [1950-1960].
- "Aesthetics," *Encyclopedia Americana*, article, 1917.
- Aid for German-Refugee Scholars Must Come from Non-Academic Sources, 1934.
- An Alternative to the Method of Postulates, [1913-1915].
- Analysis Situs in Terms of Sequential Limit, ca. 1921.
- Analytic Properties of the Characters of Infinite Abelian Groups, 1932.
- Analytical Approximations to Topological Transformations, 1926.
- The Application of Physics to Medicine, 1960.
- Approximation, [1915-1920].
- Atomic Knowledge of Good and Evil, 1950.
- The Automatic Factory, 1953.
- Automatization, 1954.
- The Average of an Analytical Functional, 1921.
- The Average of an Analytical Functional and the Brownian Movement, 1921.
- The Average Value of a Functional, 1924.
- Back to Leibniz, 1932.
- Behavior, Purpose and Teleology, 1943.

- Bertrand Russell's Theory of the Nature of Reality, [1913-1915].
- Bilinear Operations Generating All Operations Rational in a Domain, 1920.
- Biographical Sketch of Philip Franklin, ca. 1935.
- Bocher Prize, Speech, 1933.
- The Book and the Church, 1952.
- The Brain, 1950.
- The Brain and the Machine, 1960.
- Brain Waves and the Interferometer, ca. 1956.
- A Canonical Series for Symmetric Functions in Statistical Mechanics, 1940.
- A Categorical Set of Postulates for Non-Sequential Limit on a Line, ca. 1922.
- Causality and Information, 1953.
- Certain Formal Invariance in Boolean Algebras, 1917.
- Certain Iterative Characteristics of Bilinear Operations, 1920.
- Certain Iterative Properties of Bilinear Operations, 1920.
- Certain Notions in Potential Theory, 1922.
- Certain Theorems Concerning the Limits Sequences of Continuous Functions, [1913-1915].
- The Characteristic Properties of Linear and Non-Linear systems, ca. 1949.
- Characters of Abelian Groups, 1933.
- Chess-Playing Automata, The Turk, Mephisto, and Ajeeb, 1949.
- The Chess Playing Machine and the Machine which Governs, 1948.
- A Class of Gap Theorems, 1934.
- The Closure of Bessel Functions: Abstract, 1935.
- On the Closure of Certain Assemblages of Trigonometrical Functions, 1927.
- Coherency Matrices and Quantum Theory, 1928.
- Color-Vision and Color-Blindness, [1910-1913].
- Communication and Secrecy in the Modern World, 1950.
- A Comparison Between the Treatment of the Algebra of Relations by Schroder and that by Whitehead and Russell, 1913.
- Comprehensive View of Prediction Theory, 1950.
- The Computing Machine and Form (Gestalt), 1951.
- The Concept of Group Transformation and of Group Characteristics, 1950.
- The Concept of Homeostasis in Medicine, 1953.
- Une Condition Necessaire et Suffisante de Possibilitie pour le Probleme de Dirichlet, 1924.
- Conspiracy of Conformists, 1954.
- Contribution to *Proceedings of the International Symposium on the Application of Automatic Control in Prosthetics Design*, 1962.
- A Contribution to the Theory of Interpolation, 1925.
- A Contribution to the Theory of Relative Position, 1914.
- The Contributions of the Known and the Object in the Anatomical Diagram, 1911.
- Convergence Properties of Analytic Functions of Fourier-Stieltjes Transforms, 1939.
- Critical Monism, [1910-1913].
- A Criticism of Berkeley's Theory of Knowledge, ca. 1912.
- A Criticism of Spaulding's "A Defense of Analysis," [1910-1913].
- *Cybernetics*, 1948.
- Cybernetics, Lecture for Institute of Radio Engineers, 1948.
- Cybernetics, 1948, 2nd ed. 1961.
- Cybernetics, 1950.
- Cybernetics, 1953.

- Cybernetics and Philosophy, 1951.
- Cybernetics (Light and Maxwell's Demon), 1952.
- *Cybernetics of the Nervous System*, 1965.
- La Cybernetique, 1957.
- Danger of Importance, 1957.
- Daniell Integration in Function-Space, ca. 1920.
- The Day of the Dead, 1952.
- The Decline of Cookbook Engineering, 1938.
- The Definition and Ergodic Properties of the Stochastic Adjoint of a Unitary Transformation, 1957.
- Definition of the Fundamental Notions of Projective Geometry in Terms of the Relation of the Relation of Intersection among Convex Surfaces, ca. 1915.
- Differential Space, 1923.
- *Differential Space, Quantum Systems and Prediction*, 1966.
- The Differential Space Theory of Quantum Systems, 1955.
- The Dirichlet Problem, 1924.
- Discontinuous Boundary Conditions and the Dirichlet Problem, 1923.
- The Discrete Chaos, 1943.
- Distributions Quantiques dans l'Espace Differentiel pour les Fonctions, 1953.
- The Duty of the Intellectual, 1960.
- Dynamical Systems in Physics and Biology see: Fundamental Science in 1984.
- The Dynamics of Population of One Species, 1955.
- *Dynamics of the Nervous System*, ca. 1949.
- The Economic Significance of Atomic Energy if Applied to Peacetime Use, 1950.
- Ecstasy, *Encyclopedia Americana* article, 1917.
- Einsteiniana (Facts and Fancies about Dr. Einstein's Famous Theory), 1929.
- Electroencephalography and Instrumentation, 1957.
- The Electronic Brain and the Next Industrial Revolution, 1953.
- Elements of Prediction Theory (Nonlinear), ca. 1959.
- The Emotions and the Normative Science, [1910-1313].
- The End of Educational Waste (America and Its Future Cultural Contribution to the World), 1951.
- Entropy and Information, 1950.
- The Equivalence of Expansions in Terms of Orthogonal Functions, 1922.
- The Ergodic Theorem, 1939.
- An Example of the Use of Anthology in Historical Research, [1910-1913].
- *Ex-Prodigy: My Childhood and Youth*, 1953.
- Extrapolation and Interpolation and Smoothing of Stationary Time Series with Engineering Applications, 1949. (See: Time Series).
- L'Extrapolation, l'Interpolation et le Polissage des Suites Aleatoire Stationnaires, ca. 1949.
- Fabry's Gap Theorem, 1935.
- A Factorization of Positive Hermitian Matrices, 1959.
- The Fallacy of Historiometrical Method, [1910-1913].
- The Fifth Dimension in Relativistic Quantum Theory, 1928.
- The Foundations of Quantum Theory, 1954.
- Fourier Analysis and Asymptotic Series, Appendix to V. Bush, Operational Circuit Analysis, 1929.
- *The Fourier Integral and Certain of its Applications*, 1933.
- Fourier-Stieltjes Transforms and Singular Infinite Convolutions, 1938.

- Fourier Transforms in the Complex Domain, 1934.
- From the Computing Machine to the Automatic Factory, Prepared for delivery at City College, N.Y., 1953.
- Functional Equations in Symbolic Logic, [1915-1920]
- Fundamental Science in 1984, 1964.
- A Further Contribution to the Theory of Relative Position, ca. 1915.
- The Future of Automatic Machinery, 1953.
- Gap Theorems, 1936.
- Une Generalisation des Fonctionelles a Variation Borne, 1927.
- Generalization of Ikehara's Theorem, 1939.
- Generalizations of the Wiener-Hopf Integral Equation, 1946.
- Generalized Harmonic Analysis, 1930.
- *Generalized Harmonic Analysis and Tauberian Theorems*, 1966.
- *God and Golem, Inc.*, 1964. See also: *Prolegomena to Theology*, 1962.
- Godfrey Harold Hardy, 1877-1947, 1949.
- The Grammar of the Semi-Exact Sciences, 1955.
- The Grand Privilege. See: *The Duty of the Intellectual*.
- The Group of the Linear Continuum, 1922.
- Gruppentheoretische Aufgaben, ca. 1914.
- Harmonic Analysis and Ergodic Theory, 1941.
- Harmonic Analysis and Group Theory, 1929.
- Harmonic Analysis and Random Time Functions, 1958.
- Harmonic Analysis and the Quantum Theory, 1929.
- The Harmonic Analysis of Irregular Motion, 1926.
- Heaviside Biography, 1930.
- Hermitian Polynomials and Fourier Analysis, 1929.
- High Speed and Secular Phenomena in Computing Machines, ca. 1953.
- The Highest Good, 1914.
- The Historical Background of Harmonic Analysis, 1938.
- Homeostasis in the Individual and Society, 1951.
- *L'Homme et la Machine*, 1962.
- The Homogeneous Chaos, 1938.
- How U.S. Cities Can Prepare for Atomic War (Cities that Survive the Bomb), 1951.
- *The Human Use of Human Beings*, 1950, 2nd Ed. 1954.
- *I am a Mathematician*, 1956.
- Ideas for an Outline of a Treatise on Cybernetics, 1953.
- The Impact of Communication Engineering on Philosophy, ca. 1955.
- Impact of Statistical Mechanics on Modern Physics and Physiology, ca. 1949.
- In Memory of Joseph Lipka, 1924.
- Intellectual Precocity, its Nature and Fate, 1957.
- Interaction Analysis of Spikes, undated.
- Interaction of Nerve Fibers, undated.
- Internationalization of Science, 1948.
- Introduction to Mathematical Electroencephalography, ca. 1957.
- Introduction to Neurocybernetics, 1963.
- Is Mathematical Certainty Absolute?, 1915.
- Is Will Prior to Reason?, 1911.
- The Isomorphisms of Complex Algebra, 1921.
- The Iteration of Bilinear Operations, ca. 1920.
- Kybernetik, 1960.

- *Kybernetiks of Natural Systems* by D. Stanley-Jones, preface, 1960.
- Laplacians and Continuous Linear Functionals, 1927.
- Lifetime of Learning, 1943.
- Limit in Terms of Continuous Transformation, 1922.
- Limitations of Science, 1935.
- The Limits of Possible and of Reasonable Doubt, 1911.
- A Linear Method for Determining the Flow of Causality, 1951.
- Literary Imagination, undated.

Title/Description	Instances
-------------------	-----------

Series 1. Correspondence, 1898 - 1981

Scope and contents note

The series includes both personal and professional correspondence. Letters to Wiener precede his responses if there are incoming and outgoing letters on the same day. For the more voluminous correspondence (1950-1964), the processor added a bracketed date to the bottom of each incoming letter that indicates the date of Wiener's response.

See the index of correspondence to locate specific correspondents.

Series 3. Student Notes, Professional Writings, and Lectures

Scope and contents note

The series includes both published and unpublished writings in the form of handwritten and typed manuscripts, galleys, page proofs, reprints of lectures, speeches, articles, notes, books, reviews, and contract agreements. Reviews and contract agreements follow the appropriate manuscript.

The writings are in alphabetical order by title within each year. Published writings have been filed by the year of publication, while unpublished works are filed by the year written. Some of these dates were approximated by the processor; these estimates are indicated by a circa before the year or a span of years. The manuscripts that could not be dated precede the rest (see folders 386-406).

Title/Description	Instances

Series 4. Incoming Scientific Correspondence, Lectures, and Reports

Scope and contents note

Norbert Wiener's office staff kept papers and publications that were sent to Wiener; these writings have been retained in the collection. The series includes typewritten, handwritten and printed manuscripts of articles, lectures, reports, and notes.

Anonymous works precede the identified articles and are arranged alphabetically by title (see folders 899-1124).
